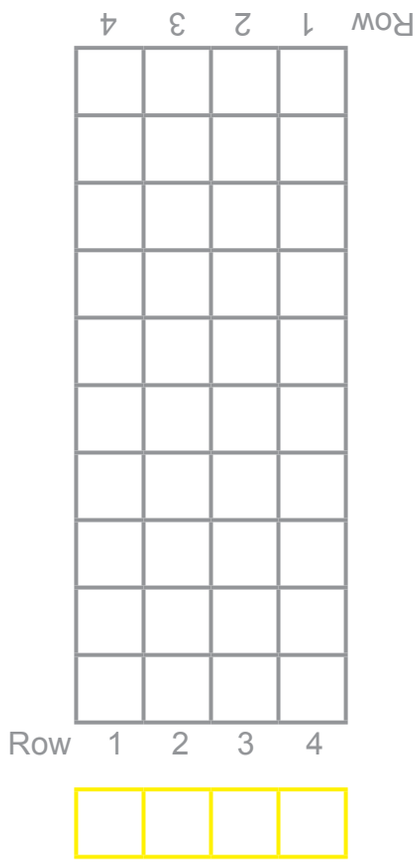
1 NUMBERS WITHIN 10 000

Break the Hidden Code

You can play this simple game with a friend or family member.

1. Think of 4 digits. All the 4 digits must be different.
2. Write the 4 digits in the yellow boxes below and hide it from your friend using your hand or a book.
3. The other player sits across from you and tries to guess the digit in each row. There are altogether 10 guesses.
4. Use **BLUE** to colour the square when the digit guessed is greater than the correct digit.
5. Use **RED** to colour the square when the digit guessed is smaller than the correct digit.
6. Use **GREEN** to colour the square when the digit guessed is correct.



Take turns to break each other's hidden code. Who uses fewer guesses to get the secret number?
